MEMORANDUM FOR THE SECRETARY OF DEFENSE

Subject: Econometric Study of Target Systems in North Vietnam (U)

1. (U) The Joint Chiefs of Staff have received and noted a briefing on a study conducted by the Air Force of the North Vietnamese economy as it relates to its war potential. A copy of the briefing script and charts is attached hereto. This study was noteworthy in its application of econometric techniques to the analysis of the North Vietnam target base. The analysis has identified six significant target systems: command and control, electric power, ports, airfields, industrial, and transportation.

2. (U) The study which was initially proposed as a campaign is now submitted to you for its value as a concept. It demonstrates the desirability of attacking these targets as systems, identifies those targets within a system which are more critical to system operation than are others, and further identifies those systems the destruction of which would most adversely affect the function of other systems.

3. (U) The Joint Chiefs of Staff consider that this Air Force proposed concept will be a helpful input to you. An oral presentation by the Air Force is available should you desire to receive it.

For the Joint Chiefs of Staff:

J. O. COBB
Rear Admiral, USN
Deputy Director, Joint Staff

Attachment

Copy No. 1/1
Case No. 94-F-0532
W. No. 94-15-041
